Green Tech

Technology Solutions for the Green Industry

Single Source Service ***ALL UNDER ONE ROOF!***

Water Management Products & Services

1

SiteOne Green Tech's Local Technical Support and Field Service is built into every product that bears our name. We pride ourselves on providing timely field service to our customers. Call us or visit www.greentech.siteone.com to submit a field service request on-line.

2

For 30 years, our **Prefabricated UL listed Satellite Assemblies** have been the professional's #1 choice to protect valuable remotely managed irrigation control equipment. Backed by our 5 year limited warranty, the irrigation controller, options, terminal boards, 120VAC outlet, grounding lug and on/off switch are all pre-assembled in your choice of stainless steel enclosures. Use our online configurator to specify a custom assembly. Visit www.greentech.siteone.com.

3

Pre-fabricated Pump Assemblies are available in a wide range of flows and pressures for flooded-suction, boost and suction-lift applications. All equipment is housed within a powder-coated steel or aluminum vandal-resistant enclosure. Local technical support and field service make these a smart choice for designers, installers and end users.

4

Fully Integrated Rain Water Harvesting Systems provide sole source accountability from a name you can trust. Above and below ground storage vessels, pumping equipment and controls, filters, water treatment options and accessories round out SiteOne Green Tech's fully integrated water harvesting systems.

5

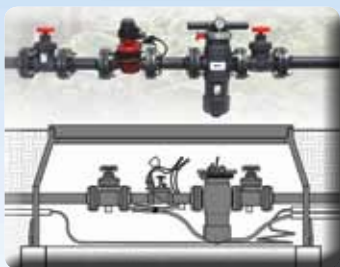

GTV Automatic Self-Cleaning Filters handle a wide range of flows with screen apertures down to 10 micron. Space saving, hydraulically operated, requires no electricity. Short flush cycles use minimal amounts of water. GTV applications include protecting industrial equipment, irrigation and rain water harvesting systems.

Water Management Products & Services

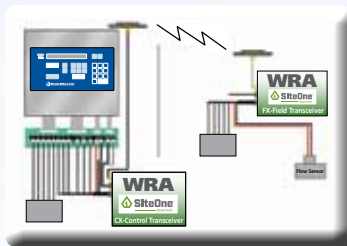

6

Prefabricated Controller Assemblies are available with most any manufacturers' irrigation controllers pre-wired to heavy duty valve output boards, 120VAC GFCI protected on/off switch, and a wide selection of optional equipment, configured within your choice of vandal resistant stainless steel enclosures. Our controller assemblies are backed by our 5 year limited warranty and can be custom designed using our website configurator at www.greentech.siteone.com.

7

Point of Connection (POC) Assembly is prefabricated with your choice of remote control master valve, flow sensor, filter, isolation valves, pipe, fittings & structural supports, pre-plumbed and mounted within a heavy duty composite utility box designed for direct burial. The installer simply sets the POC assembly in place and makes the final inlet/outlet pipe connections. The POC assembly is pressure tested prior to shipment to ensure a leak-free professional finished product that is covered by our 5 year limited warranty.

8

Wireless Relay Assembly (WRA) utilizes spread spectrum radio to wirelessly operate up to 48 irrigation valves & 2 Flow sensors. NO WIRE runs back to the irrigation controller. No FCC license required. Other applications include pump start, master valve control, water features, lighting, automatic gates and door locks. Use our **Wireless Relay Assembly Multi-point (WRAM)** to consolidate multiple field locations to a single controller.

9

GT Touch Control Sports Field Irrigation Controller offers basic irrigation functions with user-friendly touch screen navigation. Operate either on-site or remotely via built-in modbus connectivity, compatible with most building management systems. Up to 74 station capacity with optional sensor inputs.

10

Green Tech Solar Assemblies harness the sun's energy to provide continuous 110VAC power for a variety of irrigation, lighting, communication and pump controls. These environmentally friendly assemblies consist of a solar array & pole mounting bracket, with pre-wired batteries, charge controller and inverter assembled into your choice of stainless steel pad-lockable enclosures. Our solar energy solutions are designed to provide a reliable, permanent, long-term source of power for many applications, located both on and off the grid.
